2. Product Summary

Name of product:

MarketGator

Description of Product:

The purpose of MarketGator is to connect the San Francisco State University community and create a platform where SFSU students and faculty can buy, sell, or share free digital media. This platform shall facilitate the process of gathering items which shall range from obtaining textbooks, finding media resources that can be used for university projects, or to share created content among students and faculty. Our technology shall empower the SFSU students and faculty to pursue their academic and personal goals by providing an e-commerce platform that will undermine the old ways of purchasing works at high prices from online vendors who charge at a premium price.

Itemized list of all major committed functions:

1. Registered users shall inherit all the access that unregistered users have.
2. Unregistered users shall be able to create a new account with valid SFSU email.
3. Unregistered users shall be able to view listings
4. Unregistered users shall be able to search listings
5. Registered users shall be able to post items for buying or selling.
6. Registered users shall be able to log in with valid SFSU emails.
7. Registered users shall be able to view their posts through the dashboard.
8. Registered users shall be able to view their messages through the dashboard.

9. Registered users shall be able to inquire about the items by sending a message to the sellers.
10. Registered users shall be able to receive responses from the sellers.
11. Administrators shall be able to log in with valid SFSU emails.
12. Administrators shall inherit all the access of registered users.
13. Administrators shall be able to review the listings from the registered users who are currently advertising a digital item for sale.
14. Administrators shall be able to deny listings that violate the rules and policies of the MarketGator before they are published.
15. Administrators shall be able to ban the registered users who violate the rules and policies of the website.
16. Unregistered users shall be able to view the details of the listings such as price, pictures of the digital media, description of the digital media, classes and professors related to the digital media, ratings, and the reviews of sellers.
17. Unregistered users shall be able to sort and filter the items and the listings based on categories and classes etc.

Unique feature of product:

A feature that makes MarketGator unique from competitors is its straightforward user interface.

URL to MarketGator:

1. Executive Summary

The purpose of MarketGator is to connect the San Francisco State University community and create a platform where students and faculty can buy, sell, or share for free digital media. This platform shall facilitate the process of gathering items which shall range from obtaining textbooks, finding media resources that can be used for university projects, or to share created content among students and faculty. Our technology shall empower the SFSU students and faculty to pursue their academic or business goals and create a culture of commerce that will undermine the old ways of purchasing works at high prices from online vendors who charge at a premium price.

MarketGator will allow users to browse its selection and register MarketGator accounts for free in order to advertise, sell, and or buy digital media. MarketGator users will also facilitate the communication between buyers and sellers in the case users need to ask about certain items listed on the market. MarketGator will also have Administrators who shall be required to approve each media item before it becomes advertised in order to verify that it conforms to SFSU rules on digital media and other common ethical rules. Items deemed unsuitable or inappropriate shall be deleted by MarketGator Administrators.

A component of MarketGator that makes it uniquely useful for SFSU students and faculty is the ability for users to not only buy their digital and or physical media with United States dollars, but also facilitate the trade of digital media for digital media. MarketGator users will be able to advertise or offer their media items for the exchange of other media items listed. The reason for this is that we are aware that as university students, money is a valuable tool that is also used to obtain nourishment and supplies, and we want not only to provide an online marketplace, but also make it easier for students to obtain the resources they need.

Another component of MarketGator will be a search by major and course. We believe that this feature will help students and faculty find the digital media that they need in a very

clean and organized way. This feature will also help users who are advertising their digital media for sell or for sharing become discovered in an easily accessible way by other users who are looking to find and or purchase the digital media that they may need.

As Team 05, we are dedicated to get MarketGator in production as we believe this ecommerce application will be beneficial for the students and faculty of SFSU. We believe we are the right fit for this project because we are all senior students of SFSU, and we know first-hand the challenges of searching for media for our courses. With our expertise, we want to apply our technological skills and build MarketGator to expedite and ease the access for the required media for our classes.

2. Personae and Main Use Cases

Persona One: Jack (Student)

About Jack:

- Jack is a very busy but determined student.
- Jack is tech savvy and understands the internet well.
- Jack's main priority is having something that is minimalistic and simple to understand.

His busy schedule does not afford him time to play around with badly made and overly complicated technology.

Goals and Scenario

- Jack needs to buy a textbook for his class and wants to have a way to buy it online and at a good price.
- Sometimes Jack is frustrated by the anonymity of sites like craigslist and wants a safer way to buy the things that he needs preferably from people in his immediate area.

Persona Two: John (Professor)

About John:

- John is a lecturer at SFSU who has been teaching for many years and is very passionate about his job.
- As John has aged, he has become increasingly frustrated with how complicated websites have become since the 90s when he started his profession.
- John wants an easily usable interface and is annoyed by extra details like ads.

Goals and Scenario

- With rising inflation John has had many issues where students of his were unable to purchase the required reading material for his class. He thinks that it would be much

easier if he could share his own ebook or other class related medias with students for a semester.

Persona Three: Jane (Student)

About Jane:

- Jane is a faculty member at SFSU who deeply values things like honesty and integrity.
- Jane is quite tech savvy and spends the majority of her free time on websites like reddit which has given her a strong grasp of the web.
- User interface is not huge issue for Jane however like most people she would prefer that it is easy to use and understand

Goals and Scenario

- Jane feels a strong conviction to make the web a safer place for the people who use it. After being scammed on craigslist multiple times she has become resolute in her new goal of policing the internet.

Persona Four: Joe (Admin)

About Joe:

- Joe is one of the admins of MarketGator who deeply cares about the user experience of the website. He has a strong user focus and likes the website to have good functionality and smooth user interface.
- Joe understands the web technologies, knows the ins and outs of the architecture of the website and has advanced programming skills.
- Joe has a lot of ideas for new features and changes but does not know if the users will like them or not.

Goal and scenario:

- Joe wants to release new features to stay relevant and ahead of competitors and get feedback on the new features from the existing users.

- Joe also wants the suggestions from the existing users to improve the website.

Persona Five: Jacob (Seller)

About Jacob:

- Jacob is a busy senior student at SFSU.
- Jacob has basic www skills and knows how to navigate and use all kinds of websites.
- Jacob has a lot of old textbooks which are in good condition and they have been in his apartments since he finished his junior semesters.

Goal and scenario:

- Jacob wants to get rid of his old textbooks and wants to get some extra cash for himself.
- Since being a full time senior student with a part time job, Jacob does not have a lot of free time. Jacob wants to sell his old textbooks at his convenience.

Use Cases

Use Case 1: Student Online Bookstore

Actor: Students, Faculty

Description:

Jane finds it difficult to get products and services at reasonable prices including books for their classes. As a result, she has to buy books often at expensive prices which is not ideal since she does not work enough to afford all the books she needs at full price. MarketGator will help with this problem by creating an online bookstore for the students and faculty of SFSU. Jane will browse MarketGator for books that were uploaded by either other students or faculty directly from the application at discounted prices instead of using services like Amazon and eBay where sellers would usually apply a premium price. Jane also discovers through MarketGator that faculty also hosts their course required ebooks for all the students in the class to download for free. Ultimately, MarketGator helps Jane get all her required textbooks in ebook format and helps her save money at the same time.

Use Case 2: User Moderation and Administration

Actor: Moderator, Students and Faculty

Description:

Joe is working as an administrator for MarketGator. MarketGator appears to be working properly however he seems to observe that users are uploading inappropriate media that is waiting to be approved to be published. Joe documents this inappropriate media and pinpoints the user who posted it for approval. Ultimately Joe denies the media from being published, and he gives a strike to the user who attempted to publish the inappropriate media. If the user does this again, they are banned from MarketGator as there will be a two-strike policy for account banning.

Use Case 3: Selling Items

Actor: Seller

Description:

Jacob wants to sell his notes containing important information and chapter summaries from the textbook he read after he passed his CSC256 course in order to recuperate some of the money he spent on the textbook. However, Jacob does not have the time to go around in person and ask colleagues if they are interested in buying his notes. Jacob then discovers MarketGator and becomes impressed by the easy navigation of media that is for sale organized by major and course number. Jacob then registers a MarketGator account and uploads his textbook notes under the tags CSC and 256 and advertises them for a dollar each download. By the end of the week, Jacob has already gotten more than ten sales on MarketGator.

Use Case 4: Free Download of Digital Media

Actor: Faculty Professor

Description:

Professor John is about to start a new semester of CSC 415 and he wants to have his students use the most recently released textbook on Computer Operating Systems. However, since the textbook is \$150 for a new edition, he wants to share his own digital copy that he bought with his new students. Professor John then uses MarketGator to register an account and upload the textbook under the tags CSC and 415. He chooses the option to have the digital textbook be downloaded for free so his students can easily access it. His students go on MarketGator, navigate to the CSC 415 results, register MarketGator accounts, and eventually download the newest operating systems textbook for free.

Use Case 5: Digital Media for Digital Media Trade

Actor: Buyer and Seller

Description:

Joe wants to purchase a digital movie off MarketGator, however they want to save their money. Joe messages the seller and asks if they are open to trading their personal library of tardigrade pictures for the digital movie and the seller accepts. MarketGator then facilitates the trade and sends the digital movie to the buyer and the tardigrade pictures to the seller. The buyer and sellers are satisfied, and the buyer ultimately saves money.

3. List of main data items and entities - data Glossary and Description

1. Users

- Unregistered_user: A general user without an account that can only search and navigate MarketGator and view seller posts.
- Registered_user: Inherits all functionality of unregistered users plus view all public pictures. Can post items for sale and buy items, but must be logged in.
- Admin: Inherits all functionality of registered users, but can modify user privileges, access all content, remove posts, modify database.

2. **Picture:** Public image accessible to all users

3. **Review:** Review that users are able to write for other users after a transaction. These include a rating and a description of why that rating was given.

4. **Transaction:** Transaction information with two user IDs of buyer and seller, transaction status, and a timestamp of transaction completion date.

5. **Item:** A media item with a listing price, sub-list items such as Course ID and or Major, description, and a single or multiple low-res photos of the digital media item.

6. **Private_message:** Message between buyer and seller to exchange contact or item information to complete a transaction.

7. **Registration_record:** The record of registration of a MarketGator user that holds information such as registration date and SFSU email.

4. Initial list of Functional Requirements

1. Unregistered User

- 1.1 Unregistered users shall be able to create a new account with valid SFSU email.
- 1.2 Unregistered users shall be able to access the homepage.
- 1.3 Unregistered users shall be able to browse listings.
- 1.4 Unregistered users shall be able to view the details of the listings such as price, pictures of the digital media, description of the digital media, classes and professors related to the digital media, ratings, and the reviews of sellers.
- 1.5 Unregistered users shall be able to sort and filter the items and the listings based on categories, price range, classes, reviews and etc.

2. Registered User

- 2.1 Registered users shall be able to sell items.
- 2.2 Registered users shall be able to buy items.
- 2.3 Registered users shall be able to log in with valid SFSU emails.
- 2.4 Registered users shall inherit all the access that unregistered users have.
- 2.5 Registered users shall be able to rate the sellers.
- 2.6 Registered users shall be able to write reviews on the items and the sellers.
- 2.7 Registered users shall be able to inquire about the items by sending a message to the sellers.
- 2.8 Registered users shall be able to receive responses from the sellers.
- 2.9 Registered users shall be able to respond to the messages from sellers.
- 2.10 Registered users shall be able to view the photos, conditions, and descriptions of the items they are selling.
- 2.11 Registered users shall be able to view the rating and reviews from the sellers.

2.12 Registered users shall receive the reviews and ratings on the items that have been sold to by another registered user.

2.13 Registered users shall be able to view the rating and reviews from the buyers.

3. Administrator

3.1 Administrators shall be able to log in with valid SFSU emails.

3.2 Administrators shall inherit all the access of registered users.

3.3 Administrators shall be able to review the listings from the registered users who are currently advertising a digital item for sale.

3.4 Administrators shall be able to deny listings that violate the rules and policies of the MarketGator before they are published.

3.5 Administrators shall be able to ban the registered users who violate the rules and policies of the website.

3.6 Admins shall be able to ask feedback from registered users on new features, user experience, and suggestions to further improve the website.

3.7 Admins shall be able to create, update, remove and improve the features and overall usability and functionality of the website.

5. Initial list of Non-Functional Requirements

1. Application shall be developed, tested and deployed using tools and servers approved by Class CTO and as agreed in M0.
2. Application shall be optimized for standard desktop/laptop browsers e.g. must render correctly on the two latest versions of two major browsers.
3. All or selected application functions must render well on mobile devices.
4. Data shall be stored in the database on the team's deployment server.
5. No more than 50 concurrent users shall be accessing the application at any time.
6. Privacy of users shall be protected.
7. The language used shall be English.
8. Application shall be very easy to use and intuitive
9. Application should follow established architecture patterns.
10. Application code and its repository shall be easy to inspect and maintain.
11. Google analytics shall be used.
12. No email clients shall be allowed. Interested users can only message to sellers via in-site messaging. One round of messaging (from user to seller) is enough for this application.
13. Pay functionality, if any (e.g. paying for goods and services) shall not be implemented nor simulated in UI.
14. Site security: basic best practices shall be applied (as covered in the class) for main data items.
15. Media formats shall be standard as used in the market today.
16. Modern SE processes and practices shall be used as specified in the class, including collaborative and continuous SW development
17. The application UI (WWW and mobile) shall prominently display the following exact text on all pages "SFSU Software Engineering Project CSC 648-848, Fall 2022. For

Demonstration Only" at the top of the WWW page nav bar. (Important so as to not confuse this with a real application).

6. Competitive Analysis

The planned advantages between MarketGator and other online marketplaces already available is enticing for San Francisco State University students and faculty. While other online e-commerce marketplace competitors charge a fee for commission on buying and selling of items, MarketGator imposes 0% fees for all trades and even supports non-currency trade by providing the feature of trading digital media for digital media. This business model supports students especially as this will be the cheapest and most accessible way for them to buy and sell digital media without having to spend their own money. Another advantage is the specific search for digital media by SFSU course number, professor, and major. This search feature will help students and faculty facilitate the findings of the digital media that they need in order to pursue their academic goals.

Marketplace	MarketGator	Competitor 1: eBay Inc.	Competitor 2: Amazon, LLC	Competitor 3: AliExpress
Fee	MarketGator takes away 0% portion of fees from sales	eBay takes away up to 12.9% of the sale price as a fee	Amazon takes away from 8% to 15% of the sale price as a fee	AliExpress takes away from 5% to 8% of the sale price as a fee
Fulfillment Method	MarketGator provides direct download of digital all items or local pickup	By courier or local pickup	Fulfillment by Amazon program or by courier	By courier

Purchase	Auction House and Buy Now	Auction House and Buy Now	Buy Now	Buy Now
Advertisement	Items are listed for free with no hidden fees	Sellers are charged when buyer purchases item	Sellers are charged when buyer clicks on item	Seller is charged the difference of their markup item price and wholesale item price
Registration	MarketGator provides absolutely free registration and service	Registering an eBay business account will impose selling fees on listing and selling of products	Basic Amazon account is free, however Amazon Prime is behind paywall to unlock all perks for buying items	Registering an account on AliExpress is free, however a commission fee is imposed when selling products
Search by SFSU course, major, professor	MarketGator is facilitates the search for digital media specialized for students and faculty	eBay does not have this feature	Amazon does not have this feature	AliExpress does not have this feature

Competitive Analysis Chart:

MarketGator vs Competitors (eBay, Amazon, AliExpress)

1. Executive Summary

The purpose of MarketGator is to connect the San Francisco State University community and create a platform where SFSU students and faculty can buy, sell, or share for free digital media. This platform shall facilitate the process of gathering items which shall range from obtaining textbooks, finding media resources that can be used for university projects, or to share created content among students and faculty. Our technology shall empower the SFSU students and faculty to pursue their academic and personal goals by providing an e-commerce platform that will undermine the old ways of purchasing works at high prices from online vendors who charge at a premium price.

MarketGator will allow users to browse its selection and register MarketGator accounts for free in order to advertise, sell, and or buy digital media. MarketGator users will also facilitate the communication between buyers and sellers in the case users need to ask about certain items listed on the market. MarketGator will also have Administrators who shall be required to approve each media item before it becomes advertised in order to verify that it conforms to SFSU rules on digital media and other common ethical rules. Items deemed unsuitable or inappropriate shall be deleted by MarketGator Administrators before being posted.

Another component of MarketGator will be a search by major and course. We believe that this feature will help students and faculty find the digital media that they need in a very clean and organized way. This feature will also help users who are advertising their digital media for sale or for sharing become discovered in an easily accessible way by other users who are looking to find and or purchase the digital media that they may need.

As Team 05, we are dedicated to get MarketGator in production as we believe this ecommerce application will be beneficial for the students and faculty of SFSU. We believe we are the right fit for this project because we are all senior students of SFSU, and we know first-hand the challenges of searching for media for our courses. With our expertise, we want to

Team 05 Milestone 05

apply our technological skills and build MarketGator to expedite and ease the access for the required media for our classes.

2. List of main data items and entities - data Glossary and Description

1. Users

- Unregistered_user: A general user without an account that can only search and navigate MarketGator and view seller posts.
- Registered_user: Inherits all functionality of unregistered. Can post items for sale and buy items, but must be logged in.
- Admin: Inherits all functionality of registered users, but can modify user privileges, access all content, remove posts, modify database.
 - Email: Email address of each user

2. Reviews:

- **User_Review:** Review that users are able to write for other users after a transaction. These include a rating and a description of why that rating was given.
 - User_review_id: ID of review
 - User_review_text: Message body of the review
 - Reviewing_user: User who created review
 - Reviewed_user: User who is being reviewed
 - Created: Time the review was created
 - Stars: Rating system of 1 to 5 stars
- **Product_Review:** Review that users are able to write for products after a transaction. These include a rating and a description of why that rating was given.
 - Product_review_id: ID of review
 - Product_review_text: Message body of the review

- Item: Item ID of being reviewed
 - Sender: User who created review
 - Created: Time the review was created
 - Stars: Rating system of 1 to 5 stars
3. **Transaction:** Transaction information with two user IDs of the two MarketGator accounts transaction status, and a timestamp of transaction completion date.
4. **Listing:** A media item with a listing price, sub-list items such as Course ID and or Major, description, and a single or multiple low-res photos of the digital media item.
- Listing_Id: Identification number to keep track of listings in database
 - Title: Title to be displayed on listing page
 - Price: Price of the item
 - Poster: SFSU Email of seller
 - Photopath: file path to photo of the item
 - Sold: Boolean value, 0 for available, 1 for sold
 - Created: Time the listing was created
 - Category: What type of item it falls under
5. **Messages**
- **Private_message:** Message between two users to exchange contact or item information to complete a transaction.
- message_id: id tag of message
 - message_user_id: user id of message
 - timestamp: timestamp of message
6. **Registration_record:** The record of registration of a MarketGator user that holds information such as registration date and SFSU email.
- a. Memo_id: Message Id

- b. Memotext: Message text body
 - c. Sender: Person who sent the message
 - d. Receiver: Person who receives the message
7. **Report:** Report for listings that violate terms of the website
- Report_id: Id number of the report
 - Report_text: Message body of the report
 - Listing: Listing ID that is being reported
 - Sender: User who initiated the report
 - Created: Time the report was created

3. Functional Requirements

Priority 1

1. Registered users shall inherit all the access that unregistered users have.
2. Unregistered users shall be able to create a new account with valid SFSU email.
3. Unregistered users shall be able to view listings
4. Unregistered users shall be able to search listings
5. Registered users shall be able to post items for buying or selling.
6. Registered users shall be able to log in with valid SFSU emails.
7. Registered users shall be able to view their posts through dashboard.
8. Registered users shall be able to view their messages through dashboard.
9. Registered users shall be able to inquire about the items by sending a message to the sellers.
10. Registered users shall be able to receive responses from the sellers.
11. Administrators shall be able to log in with valid SFSU emails.
12. Administrators shall inherit all the access of registered users.
13. Administrators shall be able to review the listings from the registered users who are currently advertising a digital item for sale.
14. Administrators shall be able to deny listings that violate the rules and policies of the MarketGator before they are published.
15. Administrators shall be able to ban the registered users who violate the rules and policies of the website.

- 16.** Unregistered users shall be able to view the details of the listings such as price, pictures of the digital media, description of the digital media, classes and professors related to the digital media, ratings, and the reviews of sellers.
- 17.** Unregistered users shall be able to sort and filter the items and the listings based on categories, price range, classes, reviews etc.

- **Priority 2**

1. Registered users shall be able to view the photos, conditions, and descriptions of the items they are selling.
2. Admins shall be able to ask feedback from registered users on new features, user experience, and suggestions to further improve the website.
3. Registered users shall be able to respond to the messages from sellers.

- **Priority 3**

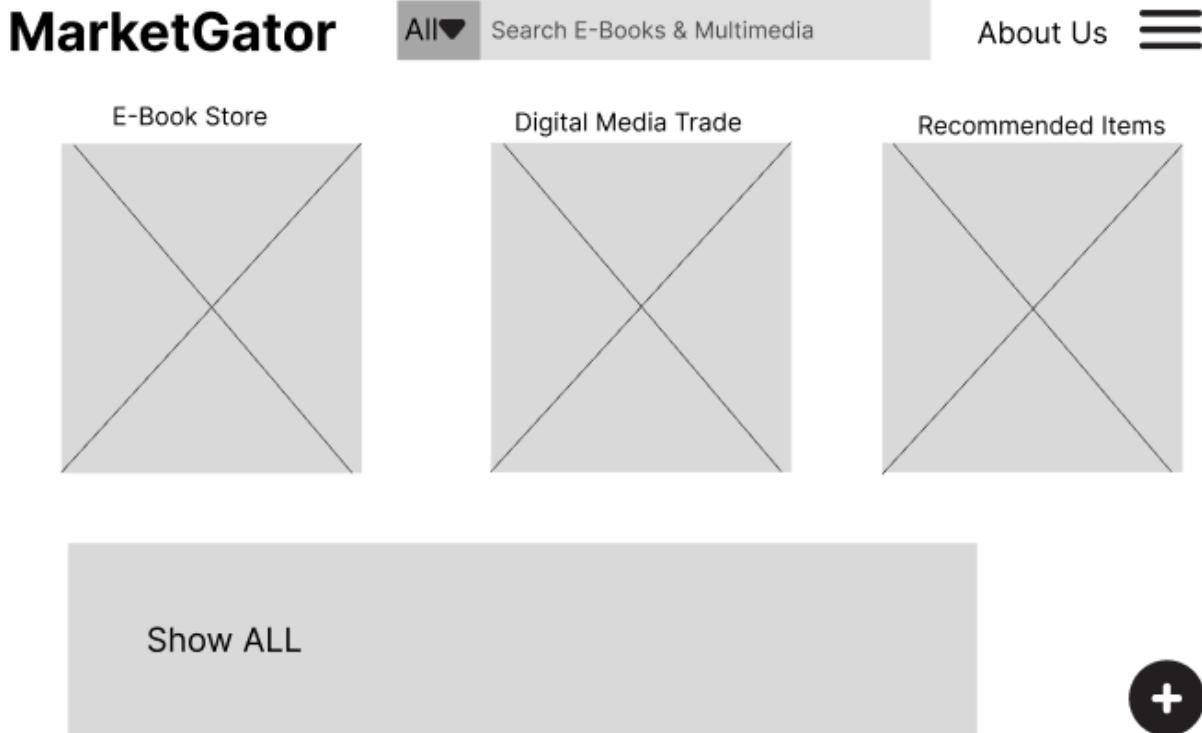

1. Registered users shall be able to rate the sellers.
2. Registered users shall be able to write reviews on the items and the sellers.
3. Registered users shall be able to view the rating and reviews from the sellers.
4. Registered users shall receive the reviews and ratings on the items that have been sold to by another registered user.
5. Registered users shall be able to view the rating and reviews from the buyers.
6. Admins shall be able to create, update, remove and improve the features and overall usability and functionality of the website

4. UI Storyboards for each main use case

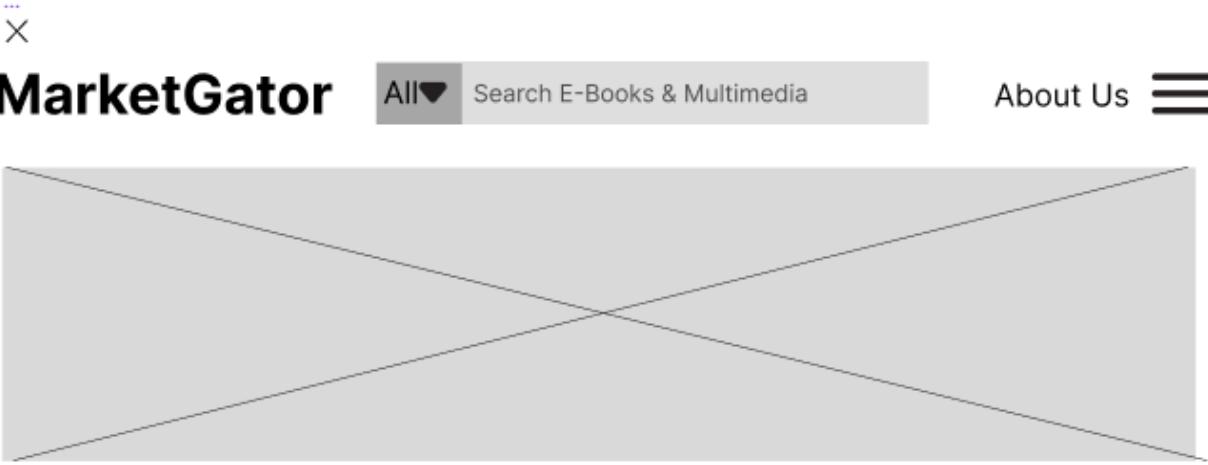

Use Case: MarketGator Registration

In this case, Jane discovers MarketGator. She browses for the first time, views a listing that she is interested in, and ultimately registers to the site in order to message the seller.

Jane is trying out MarketGator for the first time. She is browsing the homepage and looking at all the items.

Jane clicks on a listing to view an item she is interested in. MarketGator displays the webpage of the listing. At this point, she is very interested and has questions for the seller.

The image shows a screenshot of a MarketGator listing page. At the top, there is a navigation bar with a search bar containing "Search E-Books & Multimedia", a "About Us" link, and a menu icon. Below the navigation bar is a large, light-gray rectangular area with a large 'X' drawn through it, indicating that the listing content is currently unavailable or being loaded. Below this placeholder is the title of the listing: "Title of the Listing". Underneath the title is a dark gray message input field with the placeholder "Type Message to Seller Here" and two buttons: "Send" and "Share". To the left of the main content area, there is a "Seller Information" section. It includes a circular profile picture with an 'X' over it, a "Seller Name" button, a "Ratings" button, and a "Reviews" button. To the right of the main content area, there is a "Seller Details" section with a blue link. Below the "Seller Information" section is an "Item Details" section showing "Price" as \$25 and "Condition" as New. At the bottom is an "Item Description" section, which is currently empty and represented by a large gray placeholder box.

Item Description

When Jane wants to message the seller, she clicks the “Type Message to Seller Here” button. MarketGator responds by opening a new tab and showing them the webpage to register to MakerGator.

The screenshot shows a registration form for MarketGator. At the top left is the MarketGator logo. To its right is a search bar with the placeholder "Search E-Books & Multimedia" and a dropdown menu labeled "All". On the far right are links for "About Us" and a menu icon. Below the header, the word "Sign Up" is centered. The form consists of five input fields: "First Name", "Last Name", "SFSU Email", "Password", and "Confirm Password", each with a corresponding gray input box. Below these fields is a checkbox labeled "Check Here Agree with Terms and Conditions". At the bottom center is a large gray "Register" button. To the right of the "Register" button is a black circular icon with a white plus sign (+).

At this point, Jane messages the seller regarding information about their listing.

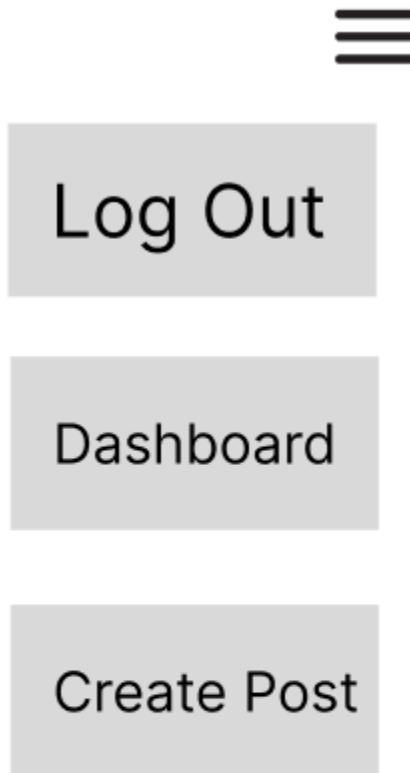

Use Case: MarketGator Selling Items

Jacob is a SFSU student who wants to sell his notes containing important information and chapter summaries from the textbook he read after he passed his CSC256 course in order to recuperate some of the money he spent on the textbook. However, Jacob does not have the time to go around in person and ask colleagues if they are interested in buying his notes. Jacob then discovers MarketGator, becomes impressed by the platform, and then registers a MarketGator account.

Now that Jacob has a registered account on MarketGator, he is ready to post a listing for his digital notes. On the MarketGator homepage, he clicks on the hamburger button on the top right corner of the webpage.

When Jacob clicks the hamburger button, a drop down menu appears showing the functions his account is able to access. Jacob clicks on 'Create Post' in order to begin creating the listing for his digital item.

After Jacob clicks the 'Create Post' button, he is brought to a new page called 'New Listing' which will be a form that he has to fill out such as title of content, price, condition, description, and photos. When Jacob is finished filling out the form, he will have to click the 'Create Listing' button which will have this listing be sent to the queue of listings waiting to be approved. Next to this button explicitly states that he must wait one to three days for his listing to be verified and approved by MarketGator administrators. At this point, Jacob has finished work on creating a listing and will wait on MarketGator to review his listing.

The screenshot shows a user interface for creating a new listing. At the top, there is a header labeled "New Listing" and a close button (X). Below the header is a large gray area with the placeholder text "Upload Photos Here". Underneath this are four input fields with labels: "Title", "Price", "Condition", and "Description", each followed by a gray input box. At the bottom left is a "Create Listing" button, and at the bottom right is a note: "Please wait 1 - 3 days for listing to be verified and approved by MarketGator administrators."

Create Listing

Please wait 1 - 3 days for listing to be verified and approved by MarketGator administrators.

Use Case: MarketGator User Uses Dashboard to Access Personal Listings and Messages

The next day after creating his listing that he sent for approval to MarketGator, Jacob wants to check the status of it. On the homepage, he clicks on the hamburger button on the top right corner of the page.

At this point, Jacob clicks on the 'Dashboard' button to view information related to his personal account on MarketGator.

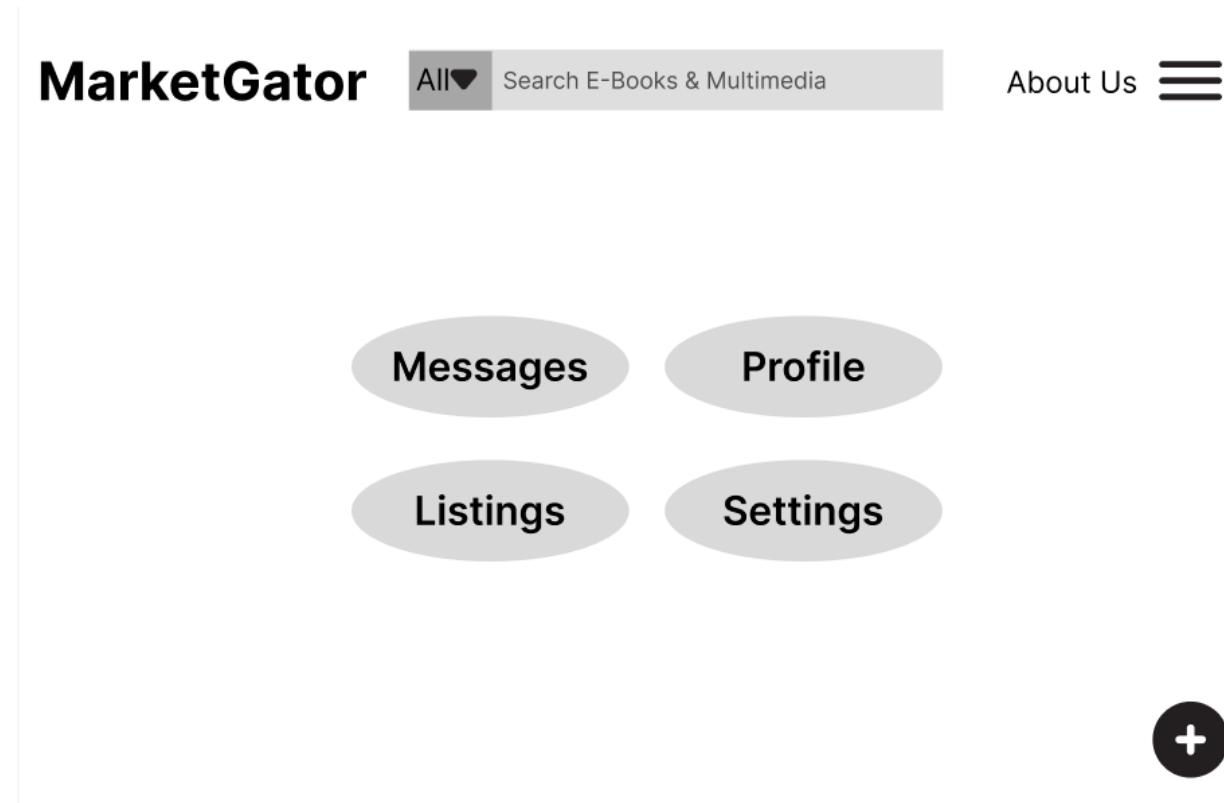

Log Out

Dashboard

Create Post

From here, Jacob is able to access functions such as viewing his personal messages, listings, profile, and settings. Since Jacob is curious about the status of his listing that he created, he clicks on the 'Listings' button.

After clicking the 'Listings' button, Joe sees that his listing that posted has been approved. He discovers this as underneath his personal listing, there is a status field with the word 'Approved' next to it meaning that it has been reviewed and is now available for the public to access on MarketGator.

The screenshot shows a user interface for the MarketGator website. At the top, there is a navigation bar with a search bar containing 'Search E-Books & Multimedia'. Below the search bar, there are links for 'About Us' and a menu icon. The main content area is titled 'Jacob's Listings'. A sorting option 'Sort By' is visible. One listing is displayed, featuring a placeholder image (a large gray square with a diagonal 'X') and the following details:
\$14 Listing Description 1
Status: Approved

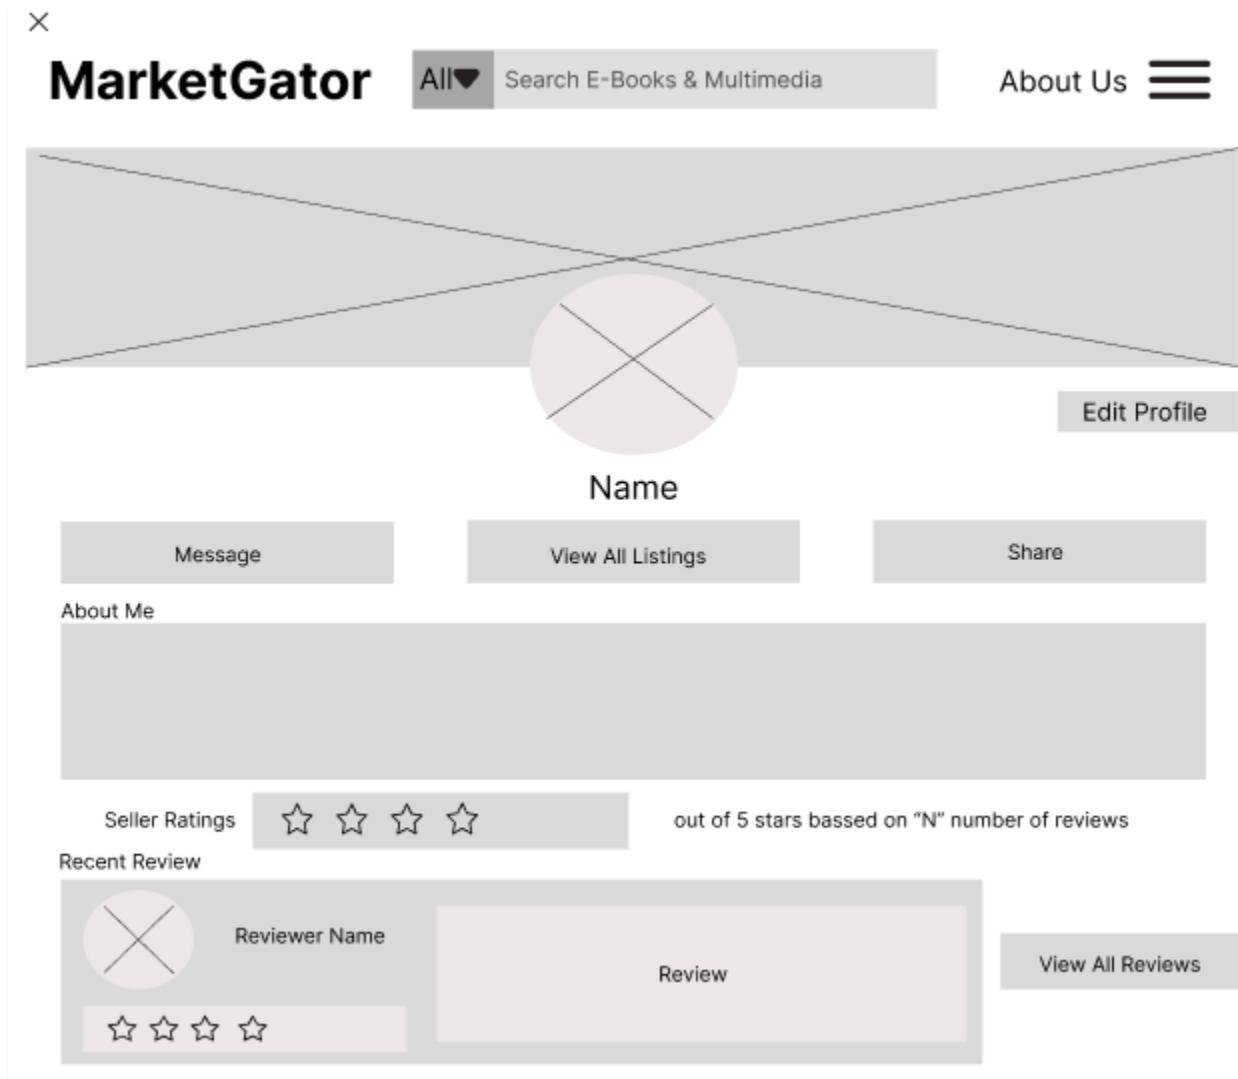

Jacob could verify this by looking up his listing through the MarketGator search function and he sees his listing is first as the listings are displayed by 'Newest'.

The screenshot shows a web page for 'MarketGator' with a search bar and navigation links. The main content area is titled 'E-Book' and displays three search results. Each result includes a placeholder image (a gray square with a large white 'X'), the book title, its rating (from 1 to 5 stars), its price, a 'Description' link, and an 'Order' button. A sorting dropdown at the top right indicates the results are ordered by 'Newest'.

Image	Title	Rating	Price	Action
	CSC256 Textbook Notes	★★★★★	\$ 14	Order
	Short Guide to C++	★★★★★	\$ 10	Order
	Handlebars-Express Tips and Tricks	★★★★★	Free	Order

Page 1 - 5 | Next >

Jacob is excited that his listing has become public on MarketGator. He then thinks about his user profile so he goes back to his dashboard to view and edit his MarketGator account. He clicks the 'Profile' button inside his dashboard. It brings him to this page, and from here Jacob is able to view and edit his profile.

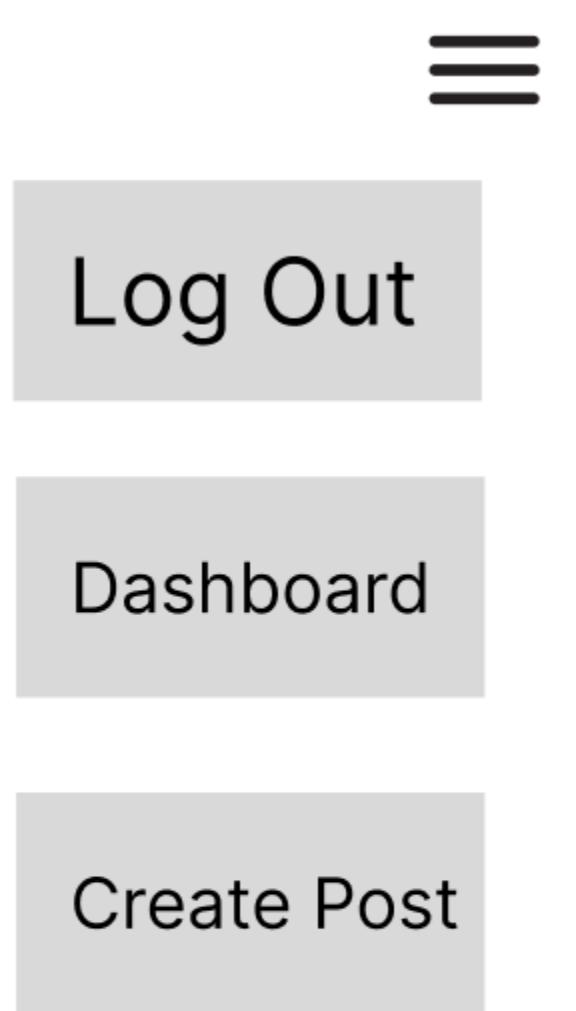

The image shows a wireframe mockup of a MarketGator profile page. At the top, there's a navigation bar with a search bar labeled "Search E-Books & Multimedia". Below the search bar is a placeholder for a profile picture with a large "X" through it. To the right of the placeholder is a "Edit Profile" button. The main area starts with a "Name" field containing a placeholder "Jacob". Below the name are three buttons: "Message", "View All Listings", and "Share". Underneath these buttons is a section titled "About Me" which contains a large, empty gray box. Further down is a "Seller Ratings" section showing four stars out of five. To the right of the stars is the text "out of 5 stars based on 'N' number of reviews". Below the ratings is a "Recent Review" section. It features a placeholder profile picture with an "X", a placeholder name "Reviewer Name", a placeholder review text box with the word "Review" inside, and a "View All Reviews" button. At the bottom of the review section is another row of four stars.

Use Case: MarketGator User Moderation and Administration

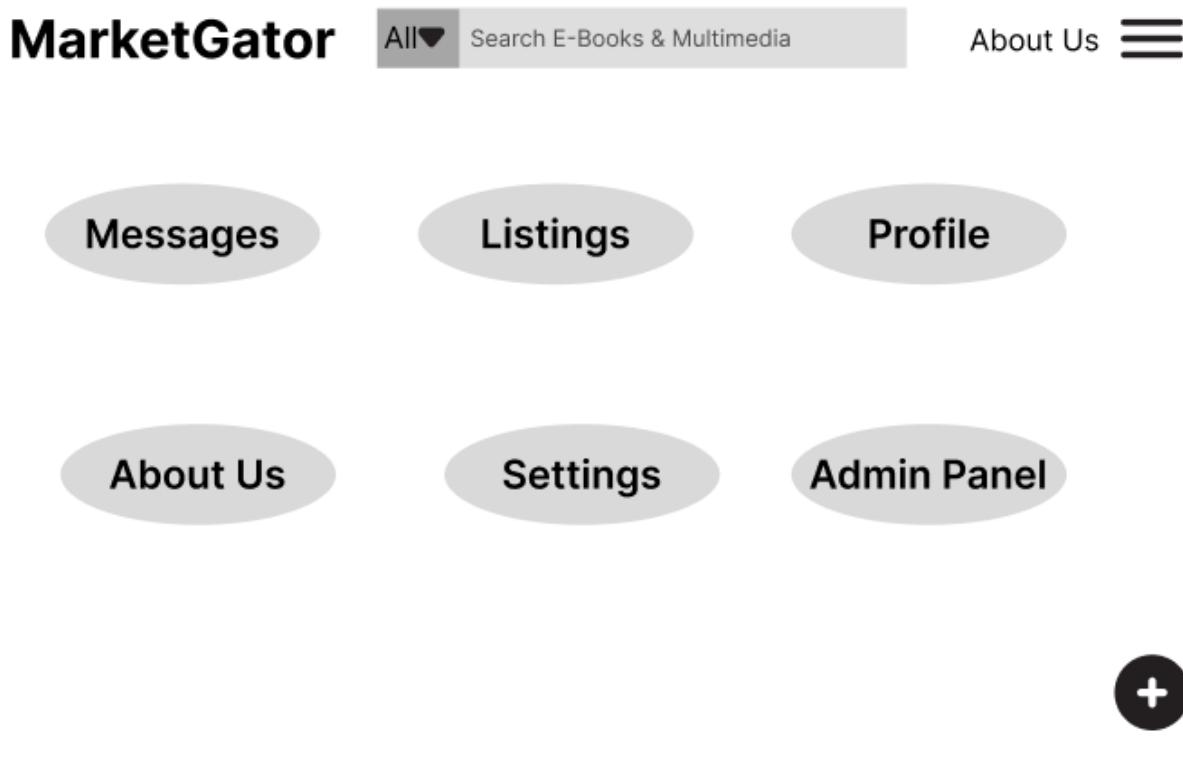

Joe is working as an administrator for MarketGator. He is logged in to MarketGator with his registered account that also has administrator privileges. Joe is required to check the queue of listings that are waiting to be published.

The image shows a screenshot of the MarketGator website's moderation interface. At the top, there is a navigation bar with the logo "MarketGator", a dropdown menu labeled "All" with a downward arrow, a search bar containing "Search E-Books & Multimedia", and links for "About Us" and a menu icon (three horizontal lines). Below the navigation bar, there are three sections: "E-Book Store", "Digital Media Trade", and "Recommended Items". Each section has a large gray placeholder area with a large "X" drawn through it. In the center of the page, there is a large, semi-transparent gray rectangular overlay containing the text "Show ALL". In the bottom right corner of this overlay, there is a black circular button with a white plus sign (+) in the center.

Joe clicks on the hamburger button on the top right corner of the screen. A drop down navigation menu appears. Joe clicks on ‘Dashboard’ in order to access his account’s personal MarketGator tools.

Joe is now viewing his personal dashboard for his MarketGator account. Since his MarketGator account has administrator privileges, he is able to see the Admin Panel button in his dashboard. Joe clicks on the Admin Panel button.

After clicking the Admin Panel button, Joe is brought to this page where he is able to view the queue of listings waiting to be published. Joe is able to click and view the listings as if they are regular MarketGator listings however they are not public yet. He clicks each listing and verifies their content, and if they are within the standard of SFSU and MarketGator content rules, then he ultimately clicks the 'Allow' button attached to that listing in order to make it public for MarketGator.

MarketGator All Search E-Books & Multimedia About Us 

Listings Waiting To Be Published

	Product Name Description	Allow	Deny
	Product Name Description	Allow	Deny
	Product Name Description	Allow	Deny

Page 1 - 2 | [Next >](#)

When Joe views a listing that breaks the standard of SFSU and MarketGator content rules, he ultimately clicks the 'Deny' button. This brings up a new tab prompting the administrator to send a response back to the account of that listing on why their listing has been denied.

Reason For Denying Listing

Product Name
Description

Please explain reason for denying listing here...

Send

Once Joe completes the deny listing form, he is prompted by a new screen which confirms his action and that the listing was deleted from the database. Joe can click the 'Exit' button which will close the tab on which this window was open and resume his work.

Reason For Denying Listing

This listing was successfully denied and will be deleted from database.

Media Storage

Media items will be kept in file systems rather than DB BLOBS.

Search/Filter Architecture and Implementation

Listings will have tags along with categories. Users will search in a category, and the tags will be used with AND with the category. Terms that will be searched are titles, categories, and tags such as the author, book name, and class that it is used in. SQL and %like will be used to perform this function.

6. Key Risks

Team 05 has identified actual and specific risks in our current work such as:

- MySQL setup and development knowledge
 - The back-end members of Team 05 have greater knowledge with MySQL development so they have been sharing their knowledge and resources they use as references to the rest of the team. They shall also be required to answer questions and offer help based on MySQL and database design.
 - Document Milestone 2 Vertical Prototype so all team members can learn how to create their own pages
- Team members have different schedules from each other
 - To work around our schedules, we have managed to find a short pocket of time within our weeks where we meet on Zoom for half an hour to discuss and update ourselves on the status of our tasks.
 - However, there may be times where we may not make a meeting. Therefore, we have established a Discord server to communicate through messages and also a Trello team board for the team to access and update for when we want to know the status of a certain task.
 - Reduce Priority 1 list to bare minimum if necessary

7. Project Management

For Milestone 02, Team 05 has been meeting and discussing every Monday to sync up and plan which project requirements are needed to be fulfilled before the deadline. We have divided each required task based on the skill needed. For example, the front-end team is handling the user interface mock-ups while the back-end team is handling the high level architecture and database organization.

To keep track of status for each task, I have created a Trello project which contains the Trello board for Milestone 02 and its required tasks to be fulfilled. Each member shall be required to update the board when they are finished, and Team Lead will check periodically to ensure that we are on track on fulfilling Milestone 02 on time.

For future tasks, we plan to continue using Trello, and also other tools such as Zoom and Discord to stay in communication with each other. We will also continue using team productivity tools such as Figma and Google Docs to work tasks together in real-time or individually as it has proven to be worthy to Team 05's productivity so far.

Milestone 3:

Summary of Milestone 3 meeting review with Prof. Petkovic and plans for further development

Team number: 05

Meeting date: November 14, 2022

Summary of feedback on UI (record all pages that need revision):

Feedback of the UI was negative as most of our basic components for homepage, search results, search details, and message to the application and database were not fully implemented or at least hard coded into the application.

Pages that need revision are:

- main.hbs
- login.hbs
- registration.hbs
- searchresults.hbs
- dashboard.hbs
- inbox.hbs

Summary of feedback on code and architecture:

For code, there are files that are missing headers and it needs more comments in order to ensure that the code is easy to maintain and easy to contact the person who wrote the code.

For architecture, we need to divide our code into partitions between front-end and back-end. Therefore, we have to create front-end and back-end folders in our application directory which will store the appropriate code based on its function.

Summary of feedback on github usage

For GitHub usage, the team has to be more descriptive in their message commits. Even though we may have said, “Fixed bug in home.hbs”, it would be more helpful to be more distinct on what bug we exactly fixed.

Summary of feedback on DB

For the database, feedback was good. We mostly have all the tables and data that we need for the application. One thing missing was a column for listings-table that determines if the listing is live or not.

Summary of feedback on teamwork and risk management

For feedback on teamwork and risk management, it was mostly negative as our site did not reflect what we were reporting to the professor before M3. We will mitigate this by implementing SCRUM meetings and attempting to use Trello to track our milestones.

Confirm that you have done architecture review to check that developers adhere to MVC pattern, coding style, minimal agreed documentation etc.

We have done an architecture review and the MVC pattern is not there yet.

Record if OK or list the issues found. Request developers follow up on corrections and follow up later by doing code reviews

- Project directory does not follow MVC format
- Back-end and front-end files are all over the place

List below agreed upon P1 list of features for final delivery which constitute product plan. NOTE: after this meeting the team focuses solely on this P1 list of features, e.g. the development is in “feature freeze mode”. All listed P1 features (no more no less) MUST be delivered in usable way, free of bugs

1. Homepage
2. Search results
3. Search details
4. Message to the application

Any other comments and issues

We must not continue our current work organization and start becoming more organized and incorporate more communication.

Check Point (CP) if given, DUE: November 22, 2022

IMPORTANT for selection of P1 features: analyze what needs to be done, prioritize based on two factors: a) importance for the product/user and b) cost/ability to deliver it in given schedule. Based on this come up with the plan (list of P1 features) then execute it. After this the team is in “feature freeze” mode, focus is on P1 features only

1. Product Summary

Name of product:

MarketGator

Description of Product:

The purpose of MarketGator is to connect the San Francisco State University community and create a platform where SFSU students and faculty can buy, sell, or share for free digital media. This platform shall facilitate the process of gathering items which shall range from obtaining textbooks, finding media resources that can be used for university projects, or to share created content among students and faculty. Our technology shall empower the SFSU students and faculty to pursue their academic and personal goals by providing an e-commerce platform that will undermine the old ways of purchasing works at high prices from online vendors who charge at a premium price.

Itemized list of all majors committed functions:

1. Registered users shall inherit all the access that unregistered users have.
2. Unregistered users shall be able to create a new account with valid SFSU email.
3. Unregistered users shall be able to view listings
4. Unregistered users shall be able to search listings
5. Registered users shall be able to post items for buying or selling.
6. Registered users shall be able to log in with valid SFSU emails.
7. Registered users shall be able to view their posts through the dashboard.
8. Registered users shall be able to view their messages through the dashboard.
9. Registered users shall be able to inquire about the items by sending a message to the sellers.
10. Registered users shall be able to receive responses from the sellers.
11. Administrators shall be able to log in with valid SFSU emails.
12. Administrators shall inherit all the access of registered users.

13. Administrators shall be able to review the listings from the registered users who are currently advertising a digital item for sale.
14. Administrators shall be able to deny listings that violate the rules and policies of the MarketGator before they are published.
15. Administrators shall be able to ban the registered users who violate the rules and policies of the website.
16. Unregistered users shall be able to view the details of the listings such as price, pictures of the digital media, description of the digital media, classes and professors related to the digital media, ratings, and the reviews of sellers.
17. Unregistered users shall be able to sort and filter the items and the listings based on categories and classes etc.

Unique feature of product:

A feature that makes MarketGator unique from competitors is its straightforward user interface.

URL to MarketGator:

Copy and paste in URL field of web browser:

<http://54.218.4.54:3000/> DECOMMISSIONED LINK

2. Usability Test Plan

Test objectives:

For the usability test plan, we shall focus on item listing posting by the user. The goal of this usability test plan is to evaluate how feasible posting items for viewing on MarketGator is to use by the user through metrics such as effectiveness, efficiency, and satisfaction. Our target audience ranges from young adults to senior adults who work in academia. We want to ensure users of MarketGator that they can achieve the goals that they seek from the product in a manner that requires the least resources spent by them. And ultimately provide a comfortable user experience which maximizes the satisfaction of the user.

Test background and setup:

For the usability test plan, the user will enter the MarketGator site using the latest version of Google Chrome, which is 108.0.5359.98 as of December 8, 2022. This will ensure that MarketGator is being tested by the user on the latest and most popular cross-platform web browser and that the results coming from this usability test is the most accurate and most up-to-date.

Users will start already logged in to a registered MarketGator account. This eliminates any chances of the users running into any issues related to user registration and login, and saves time for the user testing the posting of items feature. However, each test user will have their own separate registered account in order to keep track of which user posted which listing.

The intended users of this usability test will be adults who study or work at San Francisco State University. The reason why these are our intended users is because MarketGator is specifically crafted for the SFSU community.

Usability task description:

Please create a listing indicating an item to advertise on MarketGator.

Evaluation of effectiveness:

To measure effectiveness, will make sure that the available functions allow the completion of creating a listing. Then we will measure what percentage of people completed the task in under 1 minute.

Evaluation of efficiency:

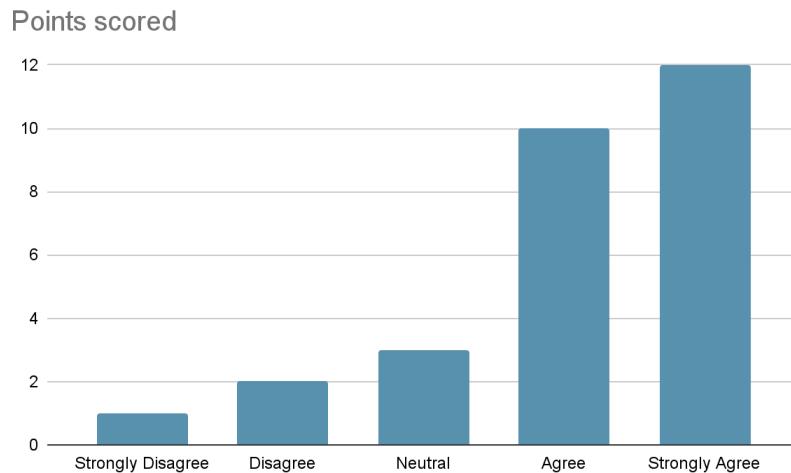

We will measure efficiency based on how many clicks it takes to reach “create listing” and the total time it takes from the dashboard to a successful listing post.

Evaluation of user satisfaction:

	Strongly disagree	Disagree	Neutral	Agree	Strongly Agree
The process of finding “Create Listing” is straightforward					

Your comments are appreciated to further improve our product
Enter Comment Here..

Percentage of users who agree or strongly agree	Average among all users	Standard deviation from average

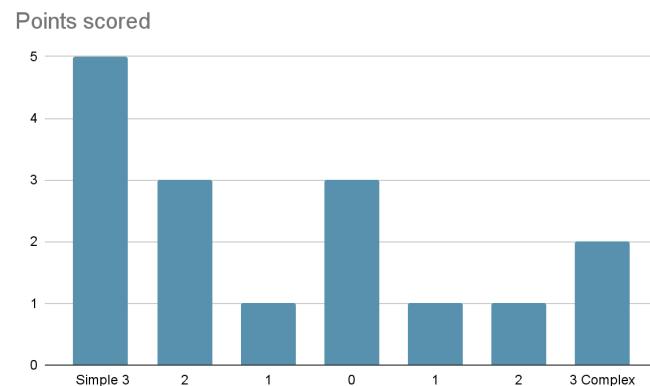

Not based on actual data. For demonstration only.

I found data entry into the input variables (title, description, etc) to be:

Simple	3	2	1	0	1	2	3	Confusing
--------	---	---	---	---	---	---	---	-----------

Your comments are appreciated to further improve our product
Enter Comment Here..

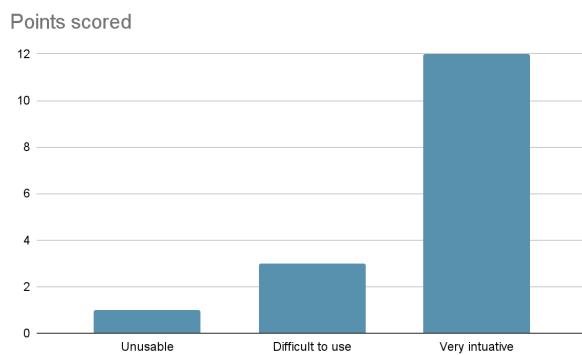

Percentage of users who selected towards simple	Average among all users	Standard deviation from average

Not based on actual data. For demonstration only.

	Unusable	Difficult to use	Very Intuitive
Rate the look and feel of the listing creation page			

Percentage of users who selected Very Intuitive	Average among all users	Standard deviation from average

Not based on actual data. For demonstration only.

3. QA Test Plan

Test objectives: To identify areas of improvement in the user experience of MarketGator
HW and SW setup:

Processor: Intel(R) Core(TM) i7-10750H CPU @ 2.60GHz 2.59 GHz

Operating system: Windows 10 version 21H2

Browser: Google Chrome Version 108.0.5359.98 (Official Build) (64-bit)

Product URL: <http://54.218.4.54:3000/create-listing>

Feature to be tested: Listing post

QA Test plan:

Use case: User is logged in and creates a listing

Number	Description	Test Input	Expected output	Pass/Fail
1	Create listing post	Title: test1 Category: Book Item Description: Test1 of listing post Price: 20 Upload photo: png/jpg file	User is redirected to their new listing page	Pass

Number	Description	Test Input	Expected output	Pass/Fail
2	Check database for posted listing that has just been posted	select * from listing WHERE listing.title="test1"	Listing appears in database with all fields correctly set from test case 1. A photopath is created to the /images/products destination and a thumbnail is created in /images/products/thumbnails	Pass

Number	Description	Test Input	Expected output	Pass/Fail

Team 05 Milestone 05

3	Check if item is NOT live	select listing.live from listing WHERE listing.title="test1" "	Live: 0	Pass
---	---------------------------	--	---------	------

Number	Description	Test Input	Expected output	Pass/Fail
4	Create listing post	Title: test2 Category: Book Item Description: Test1 of listing post Price: 20 Upload photo: Pdf file	Only images are allowed	Pass

4. Code Review

Create Listing Code Review

Michael Feger
To Patrick Celedio

Reply Reply All Forward ...
Fri 12/9/2022 5:42 PM

Hello Patrick,

I am requesting a code review for the given documents involving the code used to create a listing on MarketGator.

/application/back-end/models>Listings. Function name: ListingModel.create()
Link: <https://github.com/CSC-648-SFSU/csc648-03-fa22-team05/blob/michaelfeger/application/back-end/models>Listings>

/application/back-end/routes/Listing.js
Link: <https://github.com/CSC-648-SFSU/csc648-03-fa22-team05/blob/michaelfeger/application/back-end/routes/Listing.js>

I appreciate your input, please let me know if there should be any changes.

Michael Feger
Team 5 Backend Lead

Listing.js.pdf 282 KB

Hello Michael,

Thank you for submitting your code for review. I have reviewed your code and left appropriate comments.
I have attached these comments as PDF files. Please let me know if you have any questions or feedback.

Best,
Patrick
Team 05 Lead

5. Self-Check on Best Practices for Security

Asset to be protected	Types of possible/expected attacks	Strategy to mitigate/protect the asset
User images	Illegal content, nudity, or images irrelevant to the marketplace	Admins must approve listing posts using the listing.live variable. Listings will not be displayed to users until manually approved by admin.
User passwords	Database compromised by hacker	Passwords are encrypted inside the program and then inserted into database.
Database	SQL injection	Search function will not allow more than 40 alphanum chars. Search results and user login/registration are validated and not inserted into the database through template strings.

6. Self-check of the adherence to original Non-functional specs – performed by team leads

<ul style="list-style-type: none">MySQL setup and development knowledge	DONE

4. Product Screenshots:

The screenshot shows the MarketGator homepage. At the top, there's a navigation bar with links for 'Create Listing', 'Register', and 'Sign In'. Below the navigation is a search bar with the placeholder 'Search MarketGator...'. A central logo features a computer monitor and a smartphone above the word 'MARKETGATOR'. Below the logo, a tagline reads 'The premier platform for SF State students and faculty to meet and trade scholastic items and goods.' followed by 'Quick. Secure. Social Transactions.' A yellow 'JOIN US TODAY!' button is visible. Below this, a section titled 'Some of our top categories below!' displays four cards: 'Books' (showing a stack of books), 'Electronics' (showing a pair of headphones), 'Movies' (showing a reel of film), and 'Art' (showing a painting). The background is dark with orange and red accents.

The screenshot shows the registration page. The title 'Register' is at the top. It asks for 'SFSU Email Address', 'password', and 're-enter password'. Below these fields is a 'Password Requirements' section with the following text:
 At least one capital letter
 At least one special character (!, @, #, \$,...)
 At least 8 characters in length
 Passwords match
 A checkbox for 'By checking this box, you agree to MarketGator's Terms & Conditions before using this site.' is present. At the bottom, there's a 'Submit' button and a link 'Or click here to login if you already have an account.'

The image displays two screenshots of the MarketGator web application, showing the registration and login processes.

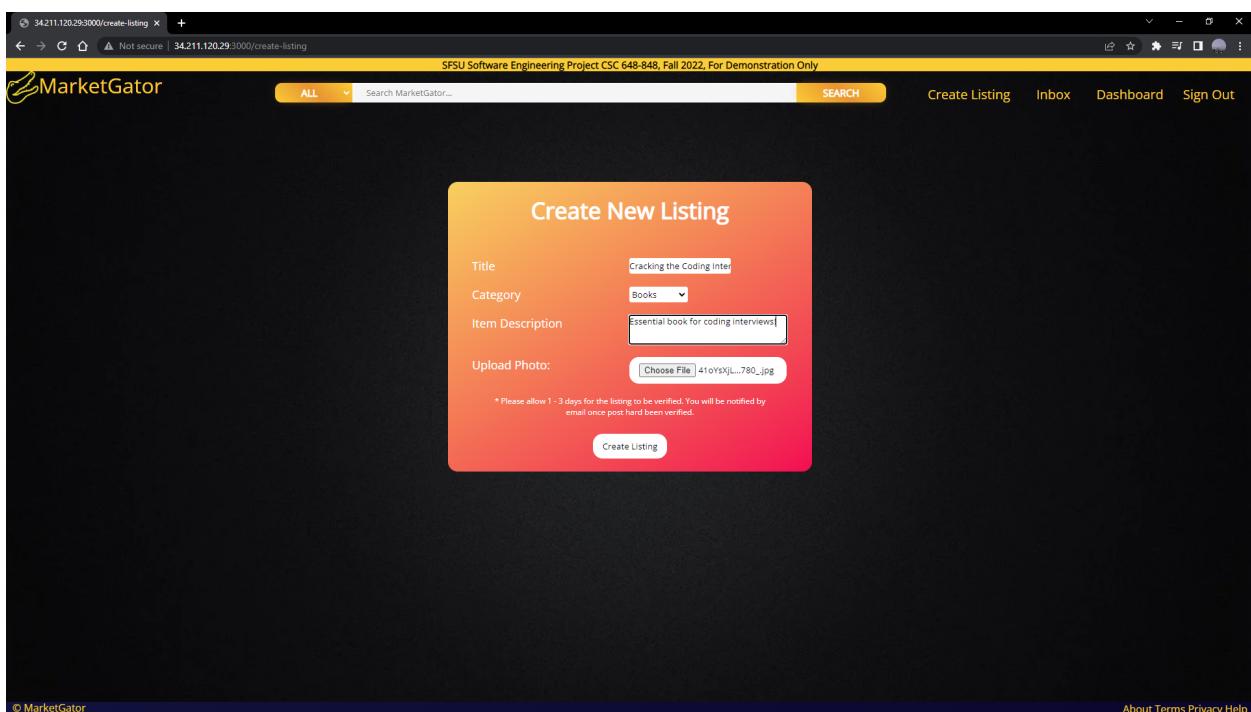

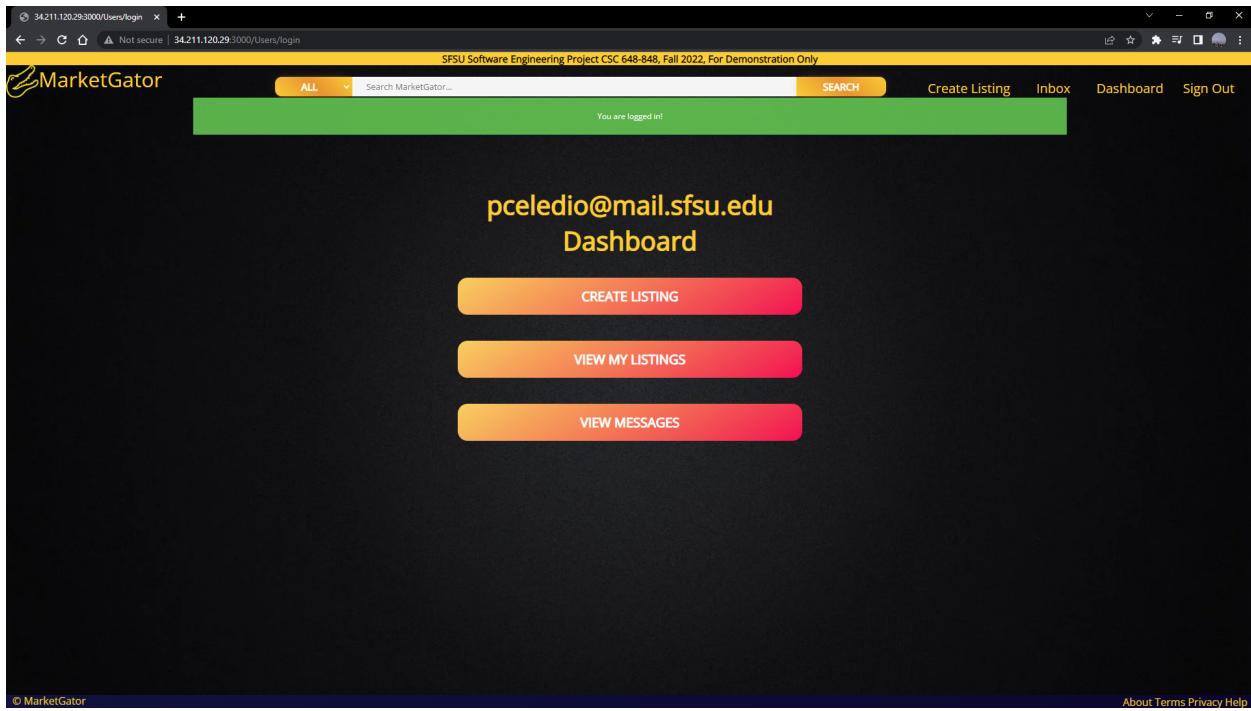

Registration Screenshot:

- The top navigation bar includes links for "Create Listing", "Register", and "Sign In".
- The main content area is titled "Register" with the sub-instruction: "In order to create an account, please enter a desired username, your email, and a personal password."
- Input fields for "Email" (pcleodio@mail.sfsu.edu), "Password", and "Confirm Password" are present.
- "Password Requirements" are listed:
 - At least one character letter
 - At least one special character (!, @, #, \$, ...)
 - At least 8 characters in length
 - Passwords match
- A checkbox for "By checking this box, you agree to MarketGator's Terms & Conditions before using this site." is checked.
- A "Submit" button and a link "Or click here to login if you already have an account" are at the bottom.

Login Screenshot:

- The top navigation bar includes links for "Create Listing", "Register", and "Sign In".
- A green banner at the top states "Account created!".
- The main content area is titled "Login" with the sub-instruction: "Welcome to MarketGator, please enter your SFSU email and password to log in."
- Input fields for "Email Address" and "Password" are present.
- Buttons for "Forgot Password" and "Login!" are at the bottom.
- A "Save password?" dialog box is open on the right side, showing "Username: pcleodio@mail.sfsu.edu" and "Password:". It includes "Save" and "Never" buttons, and a note: "You can use saved passwords on any device. They're saved to Google Password Manager for patrickcleodio@gmail.com."

8. Project management:

Tools used in the implementation of this projects are following:

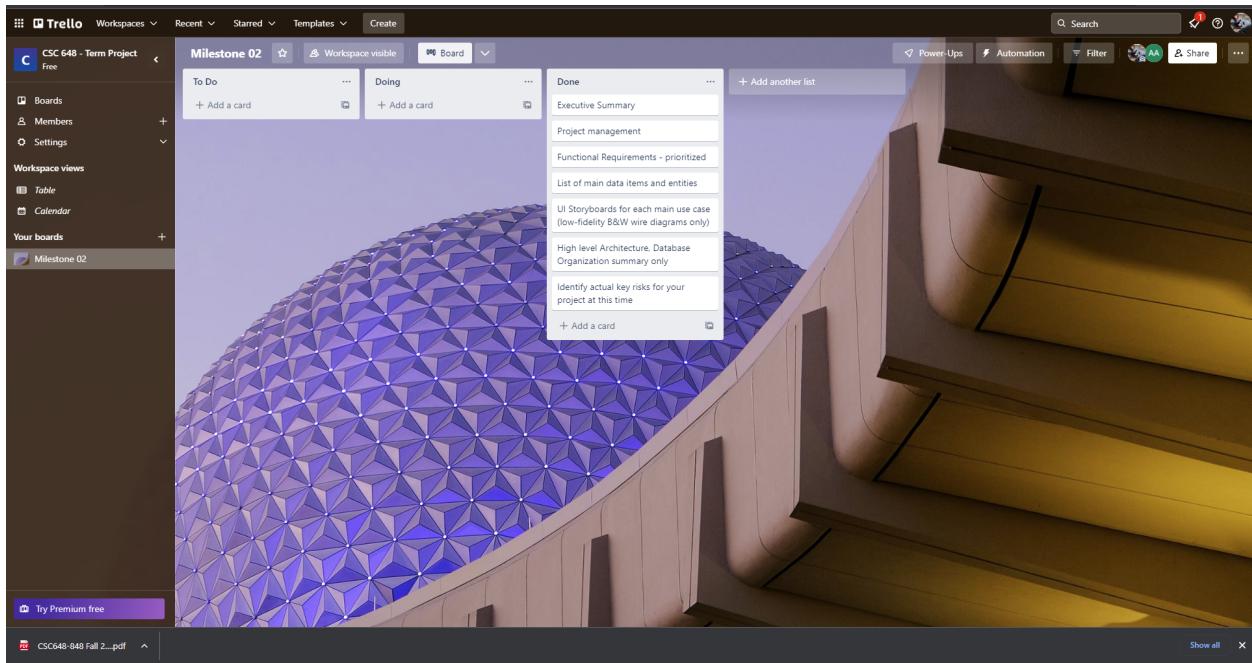

- Visual Studio Code (programming languages: Javascript, HTML, CSS and SQL)
- MySQL Workbench (Database)
- AWS
- Google Analytics
- Discord (Ad-hoc group conversation)

The screenshot shows a Discord interface with the following details:

- Channel:** # front-end
- Participants:** Patrick Celedio, elund, MichaelF, etc.
- Messages:**
 - Patrick Celedio: Am I able to pull the code and try it out
 - elund: Ye it's up
 - elund: But the conversations will only show up in your inbox if you have received a message
 - elund: here is a dummy account to test
 - elund: User: jamesbond@sfsu.edu
 - elund: Pass:1
 - Patrick Celedio: For sure
 - MichaelF: so we need to grab all messages to and from a user, and sort it by created time right?
 - MichaelF: to create the conversation
 - elund: Kind of. There needs to be a way to split up items by conversation. If you post something you might multiple people contacting you for the same posting
 - elund: So you need to split up conversations
 - elund: But you also have to make sure that if the same person contacted you for two different items that there are two different sets of messages. One for each item however both with the same user. The code I wrote enforces this so all we need now is for someone to write code to get the individual conversations and load them into text bubbles or something like that
 - MichaelF: I think this would do it
 - MichaelF: actually nvm this wouldn't
 - MichaelF: this would
- MySQL Workbench Screenshot:**

```
1 * SELECT * FROM message WHERE
2   (message.sender = "jamesbond@sfsu.edu" OR message.receiver = "jamesbond@sfsu.edu")
3   AND listing_idlisting = "21"
```

id	message	created	sender	receiver	listing_idlisting	listing_id
1	WTF	2022-12-12 23:57:09	jamesbond@sfsu.edu	elund@sfsu.edu	21	21

a. Contributions for Michael Feger:

- Created remote Amazon server and resolved several issues with code integration
- Helped manage/edit SQL database
- Linked create listing from backend to frontend
- Created and implemented search algorithm
- Listing model, listing middleware, and listing routes
- Message model, message middleware, and message routes
- Frontend flash messages for success/errors
- QA Testing

b. Total GitHub commits: 43

c. The main challenge was figuring out how to split up the work efficiently and merge our code. It was my first time working with a big group on GitHub, so there was quite a bit of learning involved. I did not commit or pull from the main branch frequently enough and ended up with large commits that involved unnecessary merge conflicts, which wasted my time.

a. Next time, I will commit more frequently. I would do more expensive unit testing before having it merged with the main branch, as a few bugs slipped by in the search algorithm. I also should have done more and asked for more code reviews. Learning more about how GitHub works will also be valuable.

Sat 12/17/2022 8:33 AM

a. Contribution of Ahmad Adnan

- Created and designed dashboard front end
- Designed create listing page
- Fixed login and registration page front end text box
- Fixed minor front end design issues in project

b. Total commits in GitHub: 11

c. The main challenge that I believe encountered during this project was working as a group more efficiently in a group setting and dividing the workload evenly with teammates and get the tasks completed on time. I think we should have put more checkpoint to see where we are with our task early in the milestone, so we didn't have to some stuff at the end.

d. I should have committed my tasks more frequently. I mainly pushed my code to GitHub when I was done with my whole task. In future I will do more commits frequently.

Best,
Ahmad

Hello Team 5,

This is my self-assessment and contributions.

a) Contributions of Nyan Ye Lin

- Created story UI board for chats, create a listing, viewed listing
- Wrote use cases for the storyboard created above.
- Created view/create the listing page.
- Bug fixes
- Testing

b) GitHub commits count: 13

c) The main challenge I faced was time management. Commuting to school was time-consuming and took a good amount of time of my days.

d) I had a lot of problems with GitHub branches and what I would do better is I would learn more about git and version control.

Best,
Nyan Ye Lin.

Fri 12/16/2022 10:54 PM

a. Rohit Devdhar's contributions to the project:

- CSS and HTML of home page (background image, cards, etc..)
- Changing minor front end details of other pages (login page, view listing page)

b. Total number of commits to main branch:

Should be around 14-15 commits when all said and done.

c. Main challenges encountered

I think the main challenges I encountered were just not doing enough work when it was earlier in the project. If I had done more work

when we were just beginning the project, we would have been less stressed to finish the project on time and could have used the last days to work out

the fine print of the project. Other than that, I was pretty familiar with git from previous projects, but this was the largest group I've used it with and

it was definitely challenging finding out what was the most recent branch to pull from. On that end, we could have been more organized and specific on which

files we were working on so that we did not have a lot of conflicts during merges and such.

d. What I would do better

Like I said above, I would definitely start earlier on the work next time so that there would be less of a time crunch down the road. I would try to find more ways to contribute to the team, so we were on track for all milestones (we needed a checkpoint for Milestone 3). Other than that, I think we had a solid group, with better cohesiveness we probably could have done a little better.

a) Ethan Lunderville project contribution:

- Created database
- Set up MVC application
- Login, Sessions and registration
- Message inbox logic for both front and backend
- Restyled all pages to be more modern
- Created cards for listings
- Refractored app to maintain architecture

b) GitHub commit count: 12

c) The main challenge we encountered was working together in an organized way. This is understandable since we all have different styles however at times this lack of consistent patterns in the code made it harder to understand what was going on and make changes to the code.

d) I think I should have split my commits into smaller chunks as opposed to just submitting huge parts of the project all at one time. That way, if a piece of my code had a bug in it, it would be easier to track down what went wrong. I also think I should have used my own branch more instead of just pushing to main all of the time.

Hello Team 05,

This is my email of the team member self-assessment and contributions:

a)

- Front-end CSS styling and rendering data from Handlebars routes such as checking if the user is currently in a logged in session
- Implemented nav bar CSS and responsive search bar CSS
- Implemented front-end password validation CSS
- Implemented skeleton HTML and front-end foundation for main.hbs, partials, about pages, and authenticated and unauthenticated pages
- Implemented front-end search functionality foundation
- Refactored project directory
- Worked on and revised milestone documents

b) Number of submissions to Team 05 GitHub branch: 116 commits

c) The main challenges I encountered from this team project was managing a team of six including myself as a team lead and balancing my part-time job and four other computer science classes. It was my first time being a leader of a project and I learned that it requires a lot of advanced people skills. In the beginning, my way of leading was based more on the assumption that that my group members will be on top of their tasks and that they already knew what to do and what must be fulfilled. However, there were occurrences where the work effort felt uneven and some were even missing towards the end of the project. I am partly to blame as I should have been more firm with assigning tasks to the group members, checking in with them by having SCRUM meetings, and assigning smaller milestones. How the team actually operated was that the individuals who were active and cared about the project volunteered and pulled their weight while others remained silent at times. It felt like a brute force approach by a few individuals more than an organized work effort, and that is an experience I learned from and would not want to repeat again if I am ever in a team lead position again.

Balancing my part-time job and four other computer science classes was very challenging. This has been probably the most intense four months of my life so far. Every week I had to handle deliverables from both my work and school, and towards the end of this semester I felt exhausted. However, I am proud of the work that was accomplished, especially with the help of my team members.

d) What I would do better next time based on what I learned in this class about SE management and processes would definitely be being more firm with checking in on team members and managing my time more efficiently on working on the application. I feel like after this experience of being a team lead for a software engineering project, there is a lot of executive management that has to be done every day such as checking in on team members and making sure we are on track with milestones. There has also been times where I would underestimate the time given before a deadline of a milestone and with the circumstances of my schedule and everyone else's, I would have done better at coordinating with everyone about a deadline and also figuring out ways to carve out time from my own schedule if possible.

I would also enforce more code review and daily check-ins on the work that was being submitted into the GitHub repo. There were times during the process of creating MarketGator where there would be merge conflicts or front-end code that was not presentable. What the team started doing later in the process was submitting their code on their repo and posting screenshots on our Discord channel so its easy for all the team members to review the code and application. I found that very effective and would incorporate that into SCRUM meetings in the future if I were to facilitate one.

Best regards,
Patrick Celedio
Team 05 Lead
